

PERFECT FOR SHORT-BED, EXTENDED-CAB TRUCKS!

ACHIEVE AN INCREDIBLE 88 DEGREE TURN!

ONLY the BIGHORN by Heartland offers short bed extended cab truck owners the ability to execute tight turns without the aid of an expensive specialty hitch!

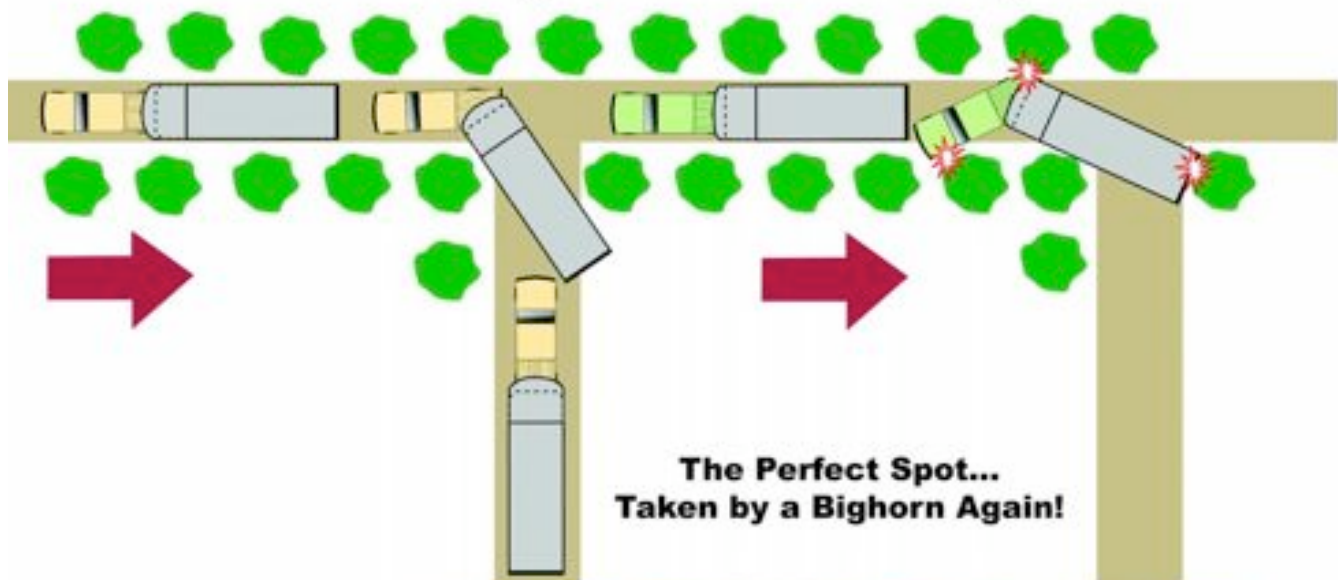

Don't join the ranks of many fifth wheel owners who have crunched the cab of their trucks against their front caps while trying to make a tight turn.

That all ends with BIGHORN!

What are some practical applications of the BIGHORN's revolutionary patented front end design? First of all, it eliminates the need to purchase one of those expensive specialty hitches in order to navigate tight turns. So, on a rainy day, while other short bed extended cab truck owners are forced to get out of their trucks to adjust or engage their specialty hitches while getting soaked – you'll be snug in your cockpit making the turn with ease. Another great application of this patent-pending design is the ability to back up into some of the tightest campsites you've ever seen. You know the ones – with the great view of the lake, but surrounded by a grove of tightly spaced trees. While other fifth wheel owners will have to pass on these prime campsites – BIGHORN owners will be able to back right in, giving the pop-up owners a run for their money!
